Continuation of 11. does NOT place the application in condition for allowance because: The request for consideration has been fully considered. A more clear copy of Figure 2 has been submitted by Applicant for consideration. This cleaner copy would overcome the issue of a difference in detection of thrombospondin peptide between Alzheimer's disease (AD) patients and healthy controls in Figure 2, but does not cause the withdrawal of the rejection of claims 15-17 under 35 USC 112, 1st paragraph. Specifically, neither the resubmitted figure nor the instant specification distinguish between the detection of thrombospondin in AD versus other neurological disorders, as previously stated in the rejection of record. For example, as previously stated, the relevant art reports that thrombospondin (TSP-1) is detected in biological samples from patients having conditions not associated with Alzheimer's dementia, such as ischemic/reperfusion injury following myocardial infarction. As such, detection of a thrombospondin polypeptide cannot be considered definitive of a diagnosis of Alzheimer's disease. No new arguments have been presented in the after final amendment. Therefore, all rejections are maintained for the same reasons of record as directed to the previously presented claim limitations.
